Frontend	React, Next.js, GraphQL
Backend	REST APIs, Kafka, gRPC/Protobuf, GraphQL, Relational & NoSQL databases
Cloud & Infrastructure	AWS (Aurora, EC2, Connect, S3, SQS, SNS, DynamoDB, Lambda), Terraform, Docker
Engineering Practices	AI-Assisted Workflows, Agile Methodologies, Pair Programming, Test-Driven Development, CI/CD, Microservices, Production Observability & Ownership

Professional Experience

Seek

May 2026 - Current6
Senior Software Engineer (contractor)

SEEK is Australia's leading online employment marketplace, operating across APAC (Australia, NZ, Hong Kong, Indonesia, Malaysia, Philippines, Singapore, Thailand) with 3,200+ employees and 120M+ candidate profiles.

- Built a solution to synchronise updates to candidate profiles to external ATS providers processing ~500,000 updates per day
- Managed & Built the infrastructure as code for the AWS-based solution (primarily lambda, dynamoDB, SQS & SNS)
- Set up the datadog & pagerduty based monitoring & alerting for the project

Block (Cash App)

June 2020 - March 2026
Senior Software Engineer (2020-2022)
Staff Software Engineer (2022-2026)

Block is a global fintech company serving 55M+ users across products including Cash App, Square, and Afterpay. One of the initial members of the Cash App Support Engineering team, leading architectural design decisions and building the systems that power customer support across multiple channels.

- Designed and built full-stack customer support infrastructure across chat, voice, and web channels serving millions of users
- Led architectural design decisions across support systems in collaboration with product, design, and support teams
- Integrated LLM-powered automation into the support platform, achieving 70% case resolution without human intervention
- Maintained production observability across 7+ services including dashboards, SLO management, alerting & incident response
- Mentored junior engineers through code reviews, pair programming, and technical guidance, supporting their growth and onboarding into the team

Thoughtworks is a global technology consultancy (10,000+ employees, 18 countries) known for pioneering Agile software development, continuous delivery, and open source.

- Delivered production software across diverse client engagements spanning multiple industries, technology stacks, and team structures over a 6.5-year tenure
- Worked across three regions (Australia, Southeast Asia, and Europe), adapting to different client contexts, cultures, and technical environments
- Progressed from graduate consultant to Senior Consultant, taking on increasing technical leadership and client-facing responsibilities
- Practiced and championed Agile methodologies, continuous delivery, test-driven development, and pair programming across client projects
- Organised and led Level Up Melbourne, providing mentorship and workshops to help university students launch careers in software

Key Projects

Live Chat Platform

Block (Cash App)

Customer support live chat system scaling to 4M+ monthly active users and 40M messages per month.

- Architected and implemented backend services powering real-time support messaging
- Built and owned the advocate-facing React chat interface as primary engineer for 4 years, delivering the greenfield build and ongoing platform evolution
- Developed bidirectional Salesforce integrations enabling seamless workflows for internal support teams

LLM-Powered Support Chatbot

Block (Cash App, Square & Afterpay)

Automated support chatbot achieving 70% resolution of inbound support cases across Cash App, Square, and Afterpay.

- Designed automated conversation flows including proactive greetings, idle state handling, and resolution pathways
- Built bidirectional translation pipelines to support non-English customers, routing messages through locale-aware LLM processing
- Scaled the platform across multiple business units, enabling consistent automated support at scale

Voice Support & Phone Callback

Block (Cash App)

Full-stack voice support system scaling to 5M+ phone cases a month.

- Implemented AWS Connect callback integration for customer phone support
- Developed the Voice Support verification application, a React-based tool for secure advocate-driven customer identity verification
- Prototyped voice AI automation using Amazon Bedrock and Amazon Q in Connect to explore automated phone support resolution

Education

Masters of Science (Genetics) by Research

2011 - 2013 (incomplete)

Monash University, Melbourne

Published research in *PLoS One* and *Journal of Experimental Botany*

Honours Bachelor of Science

2010

Monash University, Melbourne

Received H1

Bachelor of Science & Bachelor of Computer Science

2006 - 2009

Monash University, Melbourne

Distinction Average
